

CREMATION CASKETS & ALTERNATIVE CONTAINERS

Cremation Caskets are specially designed to be fully combustible, yet are also suitable for burial. They are made with minimal metal content, and are usually selected when a public viewing, visitation or ceremony is planned prior to cremation. Alternative Containers are often constructed of composite materials such as corrugated cardboard, have a modest appearance, and are usually selected when no viewing or ceremonies are planned. Both encase the body, are cremated with your loved one, and satisfy the crematorium's standards for rigidity, combustibility, and leak resistance.

BEST
